PROFESSIONAL SUMMARY

Senior software engineer specializing in backend development, with production experience designing, extending, and maintaining Laravel/PHP systems — REST APIs, payment integrations, ecommerce and logistics workflows, and database/query optimization — across SaaS, ecommerce, and logistics platforms, applying SOLID and clean-code practices throughout. Also engineers backend functionality in Go for ILORA, a multi-tenant platform spanning ERP, CRM, HR, performance management, ecommerce, and WhatsApp-based communication, adding further backend breadth alongside core Laravel/PHP expertise. Experienced across the backend lifecycle, from API design and database optimization to hands-on deployment, server configuration, and troubleshooting.

EXPERIENCE

Backend Engineer

IVERA

Jan 2026 - Present

Builds REST API services in Laravel/PHP for IVERA products and engineers backend functionality in Go for ILORA, a multi-tenant enterprise platform using Go, React, and PostgreSQL.

(Laravel/PHP) Engineers and maintains REST API services for IVERA products, applying SOLID and clean-code practices.

(Go — ILORA) Engineers backend functionality for ILORA's ERP and CRM systems: organization/tenant workflows, subscription and invoicing logic, multi-currency handling, CRM lead/deal pipelines with automated lead assignment, and booking/scheduling workflows, including backend database/query optimization.

(Go — ILORA) Engineers backend functionality for ILORA's HR, performance-management, and ecommerce systems: employee leave/overtime workflows, job-offer processing, performance evaluation and improvement-plan tracking, and ecommerce backend workflows covering product templates, attributes, and order processing.

(Go — ILORA) Develops WhatsApp-based customer-communication functionality, including session/connection management for multi-tenant usage.

Backend Developer

Algoriza

Sep 2023 - Jan 2026

Joined an existing Laravel-based SaaS ecommerce platform (Daashop) and extended and maintained its backend across the commerce lifecycle — product catalog through cart, checkout, and order management.

Extended and maintained core commerce functionality: product catalog (products, categories, variations, attributes), cart, checkout, and order management/history, with admin functionality.

Integrated and maintained four payment gateways (Paymob, PayPal, Stripe, Fawry), implementing their backend payment workflows.

Designed and documented RESTful APIs as a core part of the platform.

Implemented Redis caching and Laravel queue/background-job processing for asynchronous and heavy operations.

Optimized backend database and query performance, and covered core functionality with unit and integration testing, applying SOLID and clean-code principles throughout.

Full-Stack Developer

Buducloud

Aug 2021 - Oct 2022

Cairo, Egypt

Delivered backend and frontend features (PHP, Bootstrap, JavaScript) for internal tools and customer-facing applications across multiple concurrent projects.

EXPERIENCE

Freelance Backend/Full-Stack Developer

Workplace/Company

Jan 2021 - Jan 2023

Remote

Delivered Laravel/Bootstrap backend and frontend solutions for client projects, including the Vclasses and Donor App applications.

EDUCATION

B.Sc. Computer Science

Ain Shams University

Sep 2019 - Jul 2023

PROJECTS

Turbo for Shipping — Logistics & Supply Chain Platform (Laravel)

- Present

Engineered backend functionality across six operational modules spanning Shipments, Ticketing, Inventory, Manifest, Branches, and Franchises.

Engineered shipment status workflows and transition logic (Shipments).

Built ticket assignment, SLA handling, and AI-agent integration workflows (Ticketing System).

Developed inventory management: stock movements, transfers, reservations, and related database/query optimization (Inventory).

Implemented shipment-grouping and status workflows for manifest management (Manifest).

Engineered branch and franchise management, including entity relationships and access/permission logic (Branches, Franchises).

Used Laravel Telescope and Log Viewer for backend debugging and monitoring.

Business Now — Laravel/Filament Admin Platform

- Present

Engineered Filament-based admin and business interfaces — resources, forms, tables, filters, CRUD workflows, and relationship management — for business-specific admin functionality.

FILHOS (Laravel)

- Present

Parent-school communication platform: child attendance tracking, daily activity logs, and medication-record/dose management.

MATEN (Laravel)

- Present

Education/career-guidance platform: courses, assessment questions, and recommendation logic for study/career paths.

EVEUNITY (Java)

- Present

Backend/application-level development for an electric-vehicle charging and shipping-related application.
