

Omar Adel

Senior Backend Engineer — PHP / Laravel

Cairo, Egypt · omar.adel@ivera.net · linkedin.com/in/omar-adel-605196196

PROFESSIONAL SUMMARY

Backend engineer specializing in Laravel/PHP, with a track record of owning backend business logic end-to-end — API design, payment integrations, database performance, and production deployment — across SaaS, ecommerce, and logistics platforms. Also contributes hands-on Go development to select modules of a multi-tenant enterprise platform (ERP, CRM, HR, Performance Management, Ecommerce, WhatsApp-based communication), bringing enterprise-scale backend exposure alongside core Laravel/PHP expertise. Applies SOLID and clean-code principles consistently, and uses AI-assisted engineering tools (Claude Code, Windsurf) as part of a modern backend workflow.

CORE TECHNICAL SKILLS

Laravel / PHP (primary stack): PHP, Laravel, REST API design, OOP/MVC, SOLID principles, clean/domain-focused backend design, Eloquent ORM

Laravel Ecosystem: Filament, Sanctum, Scribe, Laravel Horizon, Telescope/Log Viewer, Redis, Queues/background jobs

Databases: PostgreSQL, MySQL

Payments & Integrations: Stripe, PayPal, Paymob, Fawry

Infrastructure & Tooling: Nginx, CloudPanel, Linux server operations, Git, Postman, PHPUnit

Additional Backend Experience (IVERA/ILORA platform): Go (secondary stack), React (admin interfaces), multi-tenant SaaS architecture

AI-Assisted Engineering: Claude Code, Windsurf — applied for codebase exploration, implementation support, debugging, and code review as part of daily backend workflow

PROFESSIONAL EXPERIENCE

Backend Engineer — IVERA

Jan 2026 – Present

Build REST API services in Laravel/PHP for IVERA products, and contribute hands-on Go development to select modules of ILORA, IVERA's multi-tenant SaaS platform (Go, React, PostgreSQL).

- **(Laravel/PHP)** Build and maintain REST API services for IVERA products, applying SOLID and clean-code practices.
- **(Go — ILORA)** Implemented ERP and CRM functionality: organization/tenant workflows, subscription and invoicing logic, multi-currency handling, backend database/query optimization, lead and deal pipelines with automated lead assignment, and booking/scheduling workflows.
- **(Go — ILORA)** Delivered HR, performance-management, and ecommerce functionality: employee leave/overtime workflows, job-offer processing, performance evaluation and improvement-plan tracking, and ecommerce capabilities within the ILORA platform.
- **(Go — ILORA)** Developed WhatsApp-based customer-communication functionality, including session/connection management for multi-tenant usage.

Backend Developer — Algoriza

Sept 2023 – Jan 2026

Extended and maintained Daashop, a Laravel-based SaaS ecommerce platform, working across its backend commerce workflow.

- Built and extended core commerce functionality: product catalog (products, categories, variations, attributes), cart, checkout, and order management/history, with an admin dashboard.
- Implemented backend integrations for four payment gateways (Paymob, PayPal, Stripe, Fawry) and their related payment workflows.
- Designed and documented RESTful APIs as a core part of the platform.
- Applied Redis caching and Laravel queue/background-job processing for asynchronous and heavy operations.
- Optimized backend database and query performance across the platform, and covered core functionality with unit and integration tests, following SOLID and clean-code principles.

Earlier Experience

Full-Stack Developer, Buducloud (Aug 2021 – Oct 2022, Cairo, Egypt) — Delivered backend and frontend features (PHP, Bootstrap, JavaScript) for internal tools and customer-facing applications across multiple concurrent projects.

Freelance Backend/Full-Stack Developer (Jan 2021 – Jan 2023, Remote) — Delivered Laravel/Bootstrap backend and frontend solutions for client projects, including the Vclasses and Donor App applications.

KEY PROJECTS

Turbo for Shipping — Logistics & Supply Chain Platform (Laravel)

Delivered backend functionality across six operational modules of a logistics/shipping platform.

- Implemented shipment status workflows and transition logic (Shipments).
- Built ticket assignment, SLA handling, and AI-agent integration workflows (Ticketing System).
- Developed inventory management: stock movements, transfers, reservations, and related database/query optimization (Inventory).
- Implemented shipment-grouping and status workflows for manifest management (Manifest).
- Built branch and franchise management, including entity relationships and access/permission logic (Branches, Franchises).
- Used Laravel Telescope/Log Viewer for backend debugging and monitoring across the platform.

Business Now — Laravel/Filament Admin Platform

- Personally implemented Filament-based admin and business interfaces: resources, forms, tables, filters, CRUD workflows, and relationship management for business-specific admin functionality.

EDUCATION

B.Sc. Computer Science — Ain Shams University, Cairo, Egypt · Sept 2019 – July 2023

ADDITIONAL INFORMATION

Applies AI-assisted engineering tools (Claude Code, Windsurf) as part of daily backend engineering workflow — codebase exploration, implementation support, debugging, and code review — as a productivity practice supporting hands-on backend development, not a separate specialization.
